

General Atomics Industry Day

Tuesday, October 18th
 4:30 PM - 6:30 PM

General Atomics is a visionary pioneer with a unique and powerful mission. Join us and you can work on transformative technology, developing the latest solutions for Nuclear Fuel Cycle, Electromagnetic Systems, Remotely Piloted Aircraft Systems, Airborne Sensors, Laser Technologies, or Biofuels. Here you'll have the freedom to look further and dream bigger. You won't wait for opportunity, you'll create it. We're a different kind of company, and if you like what you learn from this event, we could be the perfect landing spot for you. Participants will learn about the four different units within General Atomics and learn more about their internship program.

Refreshments will be provided!
